DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to a printer including a removing member, classified in class 400, subclass 701.
 - II. Claim 17, drawn to a printer including rotating members having a characteristic of ink repellent, classified in class 101, subclass 422.
 - III. Claims 18-20, drawn to a printer including a switching mechanism, a driving source and a means for controlling the driving source, classified in class 400, subclass 636.
2. The inventions are distinct, from each other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the printer which including a rotating members that are ink repellent in **group II** does not require the use of a removing member in **group I** to be operative. The subcombination has separate utility such as for a printing press.

Inventions **III** and **I** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the printer in **group III** does not require the use of a removing member in **group I** to be operative. The subcombination has separate utility for other printing devices such as for a printing press.

Inventions **III** and **II** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the printer in **group II** does not require the use of resist rollers and the switching mechanism in **group III** to be operative. The subcombination has separate utility for other printing device such as for a printing press or screen-printing.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to MINH H CHAU whose telephone number is 703-305-0298. The examiner can normally be reached on M-F 8AM - 4:30 PM.
